New Product Premiere at InnoTrans 2018

Fully-Modular DIN Rail Systems!

MEN's newest innovation is a fully-modular concept based on individual components which can be combined in flexible built-to-order configurations!

The DIN Rail modular system is designed for easy configuration and installation. The flexible configuration of module combinations makes it perfect for a wide range of functions in embedded IoT applications for various markets.

The range of single modules include a power supply unit, a CPU module and different extension modules such as wireless communication and storage. All modules can be mounted on one space-saving standard 35 mm DIN rail mount. With a wide-range 24 to 110 VDC power supply unit, the system is also compliant to the railway standard EN 50155.

See it Live at InnoTrans 2018

Visit us at the InnoTrans trade fair for transport technology in Berlin to see our new DIN Rail product family, as well as our new range of robust and compact Ethernet switches.

You can also visit our InnoTrans webpage to find out more about our featured products and make an appointment with one of our sales representatives.
