

REACH Declaration

The company MEN Mikro Elektronik GmbH is a manufacturer of electronic products and thus a so-called "downstream user" in terms of REACH.

The products we supply to you are solely non-chemical goods.

Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance.

Beyond that, according to REACH – Art.33, we will inform you immediately should a substance contained in our products (with a content of > 0.1%) be classified alarming by the European Chemicals Agency (ECHA). As far as possible, the substances named in Annex XIV (list of substances of very high concern) are not used in our purchased components. Should these be used for reasons of current technological standards, they remain below the limit values of less than 0.1% by mass.

Independent of this, we are intensely following the implementation of REACH on the part of our suppliers both in our own interest and to guarantee a high product safety for our customers. We are in close communication with our suppliers of chemical substances and preparations (e.g. raw substances, auxiliary substances and operating supplies for the fabrication and processing of our products or for use in other operative processes) and implement the pre-registration and/or later registration of the relevant substances in REACH into our supplier qualification.
